ABOUT ME

Full-stack developer and recent Information Technology graduate from Kasetsart University who builds complete web applications and adds AI features to them, from LLM and RAG integration to real-time voice. Comfortable across frontend, backend, and databases, and used to working in Agile teams and testing with real users. Seeking an entry-level web, software, or AI developer role, remote or hybrid.

EDUCATION

Kasetsart University, Sriracha Campus **Jun 2022 – Apr 2026**

Bachelor of Science in Information Technology GPA: 3.64

Awards (KU SRC): Scholarship 5A (1/2023 , 1/2025) , Good Study Award, oral presentation rated “Very Good” at AUCC 2025

TECHNICAL SKILLS

- Languages: Python, C, C#, JavaScript, TypeScript, PHP, Java, Kotlin
- Frameworks & Runtimes: Angular, React, Next.js, Vue.js, Laravel, .NET / ASP.NET, Node.js, Express.js
- Databases: Microsoft SQL Server, MySQL, PostgreSQL, MongoDB (Atlas Vector Search)
- AI: Gemini API (incl. Live API), RAG, Embeddings, Stable Diffusion, Particle Swarm Optimization
- Tools & Practices: Git, GitHub, Docker, VS Code, Android Studio, Figma, Jupyter Notebook, Unity, WebSockets, Agile

EXPERIENCE & INTERNSHIPS

Intern | TEEP Internship, Tamkang University , Taiwan (KU scholarship) **Feb 2026 – Jun 2026**

- Worked in a research team under a faculty advisor on invisible watermarking for Stable Diffusion images (DCT on the latent space).
- Implemented Particle Swarm Optimization (PSO) to replace the lab’s random embedding-position selection, following the future-work direction of its prior master’s thesis.
- Benchmarked on 100 images under 12 attacks: average detection rose from 66.1% to 82.2% with image quality maintained (mixed-PSNR 30.12 vs 29.66 dB).

Full Stack Developer Intern | Exzy Company Limited **Nov 2025 – Feb 2026**

- Built “AI Booth Assistant”, a real-time voice kiosk for exhibitions, owning both the Node.js backend (Gemini Live API, WebSockets) and the Unity frontend.
- Implemented RAG with a PDF-upload API that embeds product documents into MongoDB Atlas; migrated to gemini-embedding-001 and re-embedded the knowledge base.
- Fixed unresponsive voice input with streaming push-to-talk, and added session resumption to keep context past the Live API’s 10-minute limit.
- Iterated the UI through 5 versions from team and design feedback and on-site large-screen tests, in an Agile team with daily stand-ups.
- Write-up: My Dev Internship at Exzy (Medium)

PROJECTS

AI Booth Assistant (2026) | Unity, Node.js, WebSockets, Gemini Live API, MongoDB Atlas

- Real-time voice kiosk with RAG-grounded answers, built during the Exzy internship (details under Experience).

VillageClubHouse (2025) | Angular, .NET, Microsoft SQL Server

- Built a booking app for village clubhouse facilities such as badminton courts and meeting rooms.
- Checks available time slots and prevents double-booking.
- Admins review and approve booking requests; primary developer of both frontend (Angular) and backend (.NET), with a SQL Server database.

Online Banking (2025) | Vue.js, Laravel, PostgreSQL

- Built a simulated online banking web app with user login.
- Supports deposits, withdrawals, and transfers with balance checking.
- Solo project covering the Vue.js frontend, Laravel backend, and PostgreSQL database.

Commonfee-management (2024) | Angular, Node.js, TypeScript, Microsoft SQL Server

- Built a village common-fee management system with separate admin and resident sides.
- Issues invoices that are emailed to residents, records payments, and shows fee balances.
- Primary developer of both frontend (Angular) and backend (Node.js), with a SQL Server database.

LANGUAGES

- Thai: Native
- English: Intermediate (CEFR B1), TOEIC 595, Apr 2025
- Chinese: Beginner (self-taught)
